Our issues

It's that time again: university elections

We are a university group, which focuses on sustainability and equality for all students. Our goal is to make your everyday life at the RWTH as effortless as possible and to create a more climate-friendly university. These topics are not only important for the university itself, but also in non-related University areas. Life at the Rwth is a huge part of Aachen, therefore we are dedicated to implement our goals city-wide as well. By cooperating with other groups, we are getting acquainted with new opinions and ideas. These other approaches are always taken seriously and are incorporated in our considerations. Integrating every voiced conviction leads to fundamentally democratic decisions.

In our opinion, university life goes far beyond our studies. Due to this a similarly important topic is the social interaction at the RWTH, for instance the friendships we form along the way. New people massively improve everyday life at University. One way to meet new people is through student initiatives and study groups. Thus, we are an open group, which welcomes every new member. Furthermore, we enjoy discussing and implementing projects together.

Prioritize sustainability & climate protection!

We collaborate with other sustainable initiatives to benefit from student perspectives and ideas on these topics. Together, we strive for a more **sustainable and climate neutral university**.

In order to achieve this, we are **connected** throughout the city. For example, we network with the city council, environmental organizations and also with student councils and university initiatives. We use our direct connections to Aachen's politicians to emphasize the student's concerns and therefore improve our situation.

As a member of Campusgrün, we network **nationwide** with other green university groups and hereby learn which projects work well at other universities and where we can improve ourselves.

Implement projects together!

At our university we and many other groups initiate sustainable projects. We implement our **own projects** through our motivation, many years of experience and our connections to many groups, committees, student initiatives and institutions. We always **support** various projects and ideas with our commitment, our ad-

vice and our voice in the student parliament. By doing so, we want to enhance the implementation of the projects and improve them.

We implement sustainable ideas ourselves and don't just talk about them, for example, by showing how more biodiversity can work on our campus with our flower bed in front of the university library. We actively plant, water and maintain the flower bed.

Promote social contacts!

Due to social distancing, many students experience a lack of interaction with others. We are committed not only to a perspective after the Covid-pandemic, but also during this crisis. We want to make sure that you always have the possibility to interact with each other.

Every person should have the opportunity to find study groups and make contacts so that we have a successful study. Therefore, we advocate a **digital contact exchange platform** for all students. During the pandemic, the groups which are created can meet online, however after Covid it is also possible to meet in person. Nevertheless, the meetings in person are only feasible in a reasonable way. We are committed to ensure that **everyone arrives well at the university** and nobody has the feeling of studying in a „vacuum“.

Modernize teaching!

Due to the Corona pandemic,

teaching at the RWTH has become significantly more digital. However, the possibilities of digital teaching have yet not been exhausted, traditional teaching methods still need to be enhanced. To achieve this improvement there are numerous opportunities, for example, digital tools for surveys and concepts such as blended learning or gamification. A combination of live and pre-recorded offerings would lead to a more **flexible study**, thus we are in favour of such an implementation.

The acquisition of literature is indispensable for students, hence the uni's libraries must provide the lending of literature digitally. or improve the digital availability.

Engage international students!

Over a quarter of the student body consists of international students, yet many services are only available in German. This leads to difficulties in the life of the international students. Perhaps they do not receive enough information about the possibilities of their studies or they miss important opportunities in their everyday life at university. Due to this, we are campaigning for more information to be **translated into English**, so that more people can understand the information in the future.

Make mobility climate-friendly!

We remain committed to promoting sustainable mobility: more

secure and roofed **bicycle parking spaces** have to be planned on campus.

Bus connections should also be improved. Specifically, we would like to see an increased frequency as well as a route expansion.

In order to improve the quality of traffic safety at the center of campus, the Templergraben must remain **car-free** after the test phase starting in June!

Join us!

We meet every **Tuesday at 7:00 pm** and are always happy to welcome new students who want to get involved. Currently the meetings take place online, but we will meet in person sometime in the future again.

If you would like to drop by or learn more about us, you can message us and find information here!
